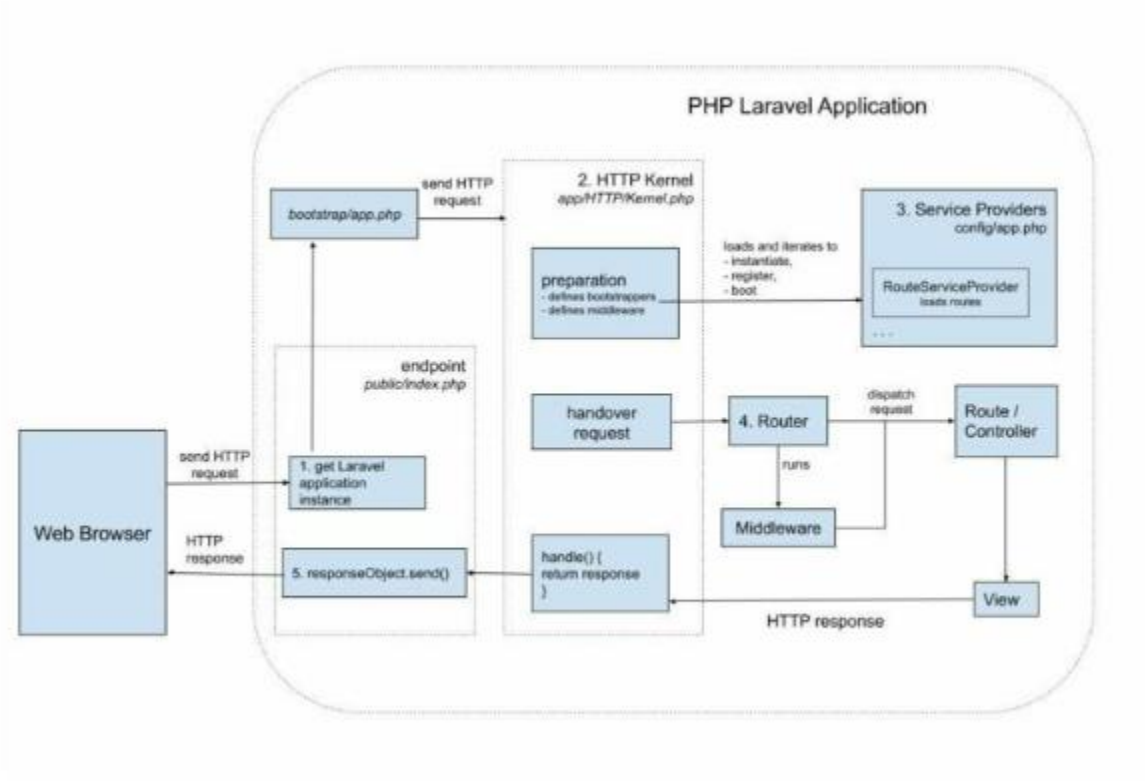
INTRODUCTION:

Tahzeeb is a cake shop website, i.e., a website that allows customers to view the Cakes and place an order according to the required occasions. Online cake shopare a great option for Bakery looking to respond to a rapidly changing operating environment – and most are relatively easy to set up. The process consists of a customer choosing the Cake of their choice, scanning the menu items, choosing an item, placing the order . Payment is then administered by paying with a credit card or debit card through the app or website or in cash at the Bakery when going to pick up. It is mainly designed primarily for the function for use in the Bakery System. This system will allow Bakery to increase online Cake ordering such type of business. The customers can select cake menu items just few minutes. In the modern food industries, it allows to quickly and easily deliver on customer place. Baker then use these orders through an easy to delivery on customer place easy find out navigate graphical interface for efficient processing. Tehzeeb here, consists of razor pay payment gateway where there is option for delivery at gym, home and office along with type of payment user would like to do i.e., card payment, upi payment or COD. For user authentication along with sign in and sign up options. Laravel is

the main platform used. The whole website is made using reusable components of PHP and Ajax and sql which include Carousels profoundly.

ARCHITECTURE FRAMEWORK :



This architecture represents the work flow of Tehzeeb(the cake shop)

1.

Project Title	Tehzeeb
Project Definition	The project greatly simplifies the ordering process for customers. It also allows vendors to add their brands and products. System presents an interactive and up-to-date product list with all available options in an easy to use manner. Customers can add orders, make payments, see review of products
Project Type	Web Application
App Category	E-commerce
Front End Tool	Visual Studio Code

Front End Technology	PHP Laravel
Back End Tool	MYSQL, Ajax with PHP,
Development Tool	HTML, CSS, JavaScript, PHP
Project Guide	Mr Suraj Patil
Submitted By	Ms Charvee Saraiya Ms Khushi Talaviya Mr TanushBannchod Mr Sumit Thakur
Submitted To	Svkm's Mukesh Patel School of Technology, Shirpur

About Technologies Used:

1. PHP Laravel:- Laravel is an open-source PHP framework, which is robust and easy to understand. It follows a model-view-controller design pattern. Laravel reuses the existing components of different frameworks which helps in creating a web application. The web application thus designed is more structured and pragmatic.
2. MYSQL:- MySQL is an important component of an open source enterprise stack called LAMP. LAMP is a web development platform that uses Linux as the operating system, Apache as the web server, MySQL as the relational database management system and PHP as the object-oriented scripting language. (Sometimes Perl or Python is used instead of PHP.)
3. Ajax with PHP:- AJAX is a technique for creating fast and dynamic web pages. AJAX allows web pages to be updated asynchronously by exchanging small amounts of data with the server behind the scenes. This means that it is possible to update parts of a web page, without reloading the whole page.
4. HTML:- HTML is the language for describing the structure of Web pages. HTML gives authors the means to: Publish online documents with headings, text, tables, lists, photos, etc. Retrieve online information via hypertext links, at the click of a button.
5. CSS:- CSS (Cascading Style Sheets) is used to style and layout web pages — for example, to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.
6. Javascript :- Javascript is used by programmers across the world to create dynamic and interactive web content like applications and browsers. JavaScript is so popular that it's the most used programming language in the world, used as a client-side programming language
7. PHP:- PHP(short for Hypertext PreProcessor) is the most widely used open source and general purpose server side scripting language used mainly in web development to create dynamic websites and applications.

✓ Existing System

- In the existing system all transactions, dealings of cakes, purchasing of cakes were done manually which is time consuming.
- To buy any product user has to collect information about it either by visiting the shop or asking people which is the better one.

Limitation:-

- We don’t have any app for our website.
- There is no facility of comparing our website with others websites.
- There is no taster available in our website.

✓ Proposed System

- Shop online is on online application, which provides the online shopping facility available for everyone.
- Shop online application concentrates more on user friendly interface and promotes user to purchase faster and easier.
- Security issue pays major importance today, extra attention towards security is done in shopping application.
- Shop online is provided with customers support page.

Features:

1. Website shows you the different types of categories and products.
2. You can check bakery items of different categories.
3. You can place order by adding product into cart.
4. You can make payment via PayPal or by cash on delivery.
5. Product will be delivered in a week.
6. You can give feedback also.
7. The user can call on help line number shown in website if any help required.

2 Scope

- The project greatly simplifies the ordering process for customers.There is a main role of super admin.It adds category(like cookies, chocolates.) and manage the vendor product. It also allows vendors to view category,and adds products(likecookies,cupcakes). System presents an interactive and up-to-date bakery items list with all available options in an easy to use manner. Customers can search product by category, add orders, make payments, see review of products.

Objective

- The main objective of our product ordering website is to help users to order product online and get it at their doorstep. The website also offers great deals

and discount on product. We provide efficient, effortless and economical service.

- User can view the product list or can apply filter by category, subcategory, brand, price. User selects the product and view details. User selects product and place order.User can enter shipping details and make payment by PayPal or Cash On Delivery. User can give feedback and make a call to customer care for any help. The vendor can view orders they have received.

Advantages

1. The main advantage of our Tehzeeb website is to allow user to place order for beauty/cosmetics product online.
2. Faster posting on Admin side as well as Vendor side and it is easy to access.
3. User can call customer care for more information or any help.
4. User can give feedback.
5. The system is easy-to-use, user friendly and simple to implement.

Disadvantages

1. Tehzeeb does not allow the task of exchange products and track orders.
